TYLER V. CLARK

GAMEPLAY PROGRAMMER | UNDERGRADUATE SOFTWARE ENGINEERING STUDENT

Lebanon, OR | (541) 405-8545 | Gameplay Portfolio | GitHub | Playable Games

SUMMARY

Undergraduate software engineering student and independent game developer with hands-on experience implementing character controls, combat systems, player abilities, and enemy interactions. Develops mechanics from concept through programming, playtesting, debugging, and refinement in Unity/C# and JavaScript.

EDUCATION

Maestro AI — Associate of Applied Science (AAS), AI Software Engineering | Oct 2025–Present

Currently enrolled; Bachelor of Science in Computer Science (Business & AI pathway) planned.

TECHNICAL SKILLS

Languages: C#, JavaScript, TypeScript, Python; foundational C++ knowledge

Engines & Tools: Unity, RPG Maker MV, Git/GitHub, FL Studio

Gameplay: Character controllers, collision and physics interactions, combat and ability systems, enemy targeting, state machines, gameplay UI, event-driven logic

Practices: Prototyping, debugging, playtesting, modular refactoring, iterative development

GAMEPLAY PROGRAMMING PROJECTS

Chaos Breaker | Unity · C# | Gameplay Programmer & Audio Systems Developer

- Programmed projectile collision, bounce tracking, and combo systems, keeping score, ball color, UI feedback, and damage calculations synchronized.
- Built upgrades that modify damage based on accumulated bounces, maintaining consistent behavior as gameplay systems interact.
- Refactored tightly coupled gameplay code into modular components to support additional upgrades and reactive audio behavior.

Starstruck | RPG Maker MV · JavaScript | Gameplay Programmer & Designer

- Developing custom JavaScript plugins for combat resources, character abilities, enemy targeting and telegraphs, and encounter management.
- Integrating combat, progression, and environmental interactions; playtesting feedback and system behavior for clarity.

On Dreams And Nightmares | Unity · C# | Gameplay Programmer & Designer

- Implemented character movement, jumping, speed mechanics, and physics-based environmental interactions.
- Tuned movement and player feedback through iteration; published a playable demo.

Additional work: Published independent games and participated in game jams.

RELEVANT EXPERIENCE

OURINC. — Game Research Moderator (Contractor) | Nov 2025

- Interviewed players about upcoming game concepts and mechanics, collecting qualitative feedback on gameplay and visual design.

Freelance Full-Stack Developer | 2021–Present

- Developed and debugged interactive applications using JavaScript, TypeScript, React, and Node.js.
