TYLER V. CLARK

GAMEPLAY PROGRAMMER | UNDERGRADUATE SOFTWARE ENGINEERING STUDENT

Lebanon, OR | (541) 405-8545 | Portfolio | GitHub | Playable Games

PROFESSIONAL SUMMARY

Undergraduate software engineering student and independent game developer with hands-on experience programming character controls, combat mechanics, player abilities, and enemy behaviors. Develops gameplay features from concept through implementation, playtesting, debugging, and refinement using Unity/C# and JavaScript.

TECHNICAL SKILLS

Languages: C#, JavaScript, TypeScript, Python; foundational C++ knowledge

Engines & Tools: Unity, RPG Maker MV, Git/GitHub, FL Studio

Gameplay: Character controllers, physics interactions, combat systems, player abilities, enemy targeting, state machines, gameplay UI, event-driven systems

Practices: Prototyping, debugging, playtesting, modular programming, iterative development, test-driven development

GAME DEVELOPMENT PROJECTS

Chaos Breaker | Gameplay Programmer & Audio Systems Developer — Unity / C#

- Programmed player mechanics, projectile collision and redirection, enemy interactions, and modular gameplay components.
- Implemented gameplay-driven audio systems responding to player actions and combat events.
- Tested and refined gameplay timing, controls, visual feedback, and interactions.

Starstruck | Gameplay Programmer & Designer — RPG Maker MV / JavaScript | In Development

- Developing custom JavaScript plugins for combat resources, player abilities, enemy targeting, and encounter management.
- Integrating combat, progression, and environmental interactions through reusable gameplay systems.
- Playtesting combat telegraphs, UI feedback, and mechanical interactions for clarity and responsiveness.

On Dreams And Nightmares | Gameplay Programmer & Designer — Unity / C# | Playable Demo

- Developed character movement, jumping, speed mechanics, and physics-based environmental interactions.
- Tuned movement and player feedback through repeated playtesting; released a playable demo.

Additional development: Published independent RPG projects and participated in game jams.

RELEVANT EXPERIENCE

OURINC. | Game Research Moderator (Contractor) — November 2025

- Interviewed players about game concepts, mechanics, and visual design; gathered qualitative feedback on player expectations and potential improvements.

Freelance Full-Stack Developer | Independent — 2021–Present

- Developed and debugged web applications using JavaScript, TypeScript, React, and Node.js; built reusable interactive components.

EDUCATION

Maestro AI | Associate of Applied Science (AAS), AI Software Engineering — October 2025–Present

Currently enrolled; Bachelor of Science in Computer Science (Business and AI Pathway) planned continuation.

Additional training: CareerFoundry Full-Stack Development; DeepLearning.AI TensorFlow coursework.
